

Surface tension reducer

Prevents air bubbles at interfacial areas while casting moulding plaster suspensions into casting moulds. It is also used as wetting agent for wax objects before investing.

GILAX is applied with a brush or an atomizer on the surface to be treated. Please pay attention the whole surface of the casting mould or the wax object shall be homogeneously covered with an extremely thin layer of **GILAX**.

It is necessary that the treated surfaces have dried completely before investing or casting. Drying with compressed air is to be avoided.

Packing units

Plastic bottles 1 ltr.

Plastic bottles 5 ltr.

Plastic containers 10 ltr.

Shelf life

At least 1 year in well closed, vapour-proof containers.
